VASUDEV CHANDRASHEKHAR METI

Software Engineer | Full Stack | Java | React | Python & Applied AI

MSc Advanced Computer Science (2026-27) | Leeds, UK

vasudevcmeti@gmail.com | +44 7438776809 | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Software Engineer with **4+ years of experience** developing and supporting full-stack enterprise applications using Java, Spring Boot, Node.js, React, Python, PostgreSQL and Redis. Experienced across API integrations, CI/CD, automated testing, security and production troubleshooting, with a strong focus on reliable and maintainable software. Currently completing an MSc in Advanced Computer Science and expanding hands-on experience in **Applied AI, LLM-based applications and AI-enabled software engineering**.

EDUCATION

Leeds Beckett University — Leeds, United Kingdom
Master's in Advanced Computer Science — Jan 2026 - Expected April 2027

Alliance University — Bengaluru, India
Bachelor of Technology in Computer Science and Engineering (8.0/10 CGPA) — 2017-2021

WORK EXPERIENCE

Software Expert - Nappy Ever After CIC, UK, (Sept 2026 – Oct 2026)

- Supporting the design and improvement of **data-driven operational and financial processes** as part of the organisation's digital transformation.
- Analysing existing spreadsheet, invoicing and service workflows and translating business requirements into **structured system and data requirements**.
- Designing structured customer, service-cycle and voucher records to improve **data quality, consistency, traceability and reporting**.
- Defining validation rules, workflow statuses and business logic to ensure operational data is accurately captured and suitable for downstream reporting.
- Supporting the design of automated workflows for recurring service records, billing information and operational processes.
- Exploring **API-based integrations and automated data flows** between business systems to reduce manual administration.

Student Data Analyst - **CSR Host Consulting Ltd**, Leeds, United Kingdom (April 2026)

- Developed **Python-based data cleaning, transformation and analytical workflows** for survey and economic datasets containing structured, categorical and qualitative information.
- Validated datasets across multiple sources, including comparison of survey outputs with regional GVA models, identifying inconsistencies and supporting **data accuracy and integrity**.
- Applied statistical analysis, regression and hypothesis testing to identify significant factors and provide evidence-based insights.
- Investigated anomalies within source data and apply validation checks before information is used for further analysis.
- Structured and prepared datasets to support repeatable analysis and reporting.
- Communicated analytical findings and data-quality observations clearly to project stakeholders.
- Worked independently across data preparation, analysis, validation and interpretation while maintaining attention to accuracy and reproducibility.

Software Engineer II - **Bottomline Technologies,** Bengaluru, India (Oct 2021 - Jan 2026)

- Developed and supported **full-stack enterprise applications** using Java, Spring Boot, Node.js, React, JavaScript/TypeScript, PostgreSQL and Redis.
- Designed and implemented **Spring Boot microservices, REST APIs and business logic** supporting enterprise workflows and integrations.
- Built React-based interfaces and worked across frontend/backend boundaries to deliver complete user workflows.
- Extensively customised a **Tyk-based API Management platform**, introducing new functionality while preserving existing workflows and compatibility.
- Worked with a Go-based backend and **Go templates, HTML, CSS and JavaScript** to extend complex platform functionality within existing architectural constraints.
- Investigated production issues across frontend, backend, APIs, authentication and databases, performing root-cause analysis and implementing sustainable fixes.
- Maintained **GitLab CI/CD pipelines** and Docker-based development environments supporting repeatable build, test and delivery processes.
- Developed automated testing using **Cypress and Jest** to improve regression coverage and application quality.
- Developed secure authentication functionality using **OIDC, SAML and MFA**.
- Participated in Agile planning, technical design, code reviews and end-to-end software delivery.
- Helped coordinate a three-developer team through planning, dependencies and technical support.

TECHNICAL SKILLS

Programming: Python, Java, JavaScript, TypeScript, Node.js
Backend Development: Spring Boot, Django, REST API development, microservices
DevOps & CI/CD: GitLab CI/CD, CI/CD pipelines, Docker, Git, Bitbucket, automated build/test workflows
Frontend: React, TypeScript, JavaScript, HTML, CSS, Bootstrap, Webpack, Go Templates
Databases & Data: PostgreSQL, MySQL, relational databases, data validation, data cleansing, data modelling, data analysis, Flyway
Data Engineering & Automation: Python, data processing, API-based data extraction, REST APIs, workflow automation, CSV/structured data processing
Testing & Quality: Cypress, Jest, automated testing, application troubleshooting, data integrity validation

PROJECTS

ModuleAtlas - Applied AI Academic Knowledge Platform *(In Progress)* | *Python, LLMs, RAG, PostgreSQL, APIs, Docker*

- Building an Applied AI knowledge platform that transforms academic content into searchable, context-aware information using LLM and retrieval techniques.
- Developing a RAG pipeline covering document ingestion, preprocessing, chunking, embeddings, retrieval and grounded response generation.
- The aim is to build a system that can **organise, connect, reason over, and evaluate knowledge**, with proper backend, data, and deployment architecture.

AutoOps Portal | *Spring Boot, React, PostgreSQL, Redis, GitLab CI/CD, Docker*

- Built a full-stack operational portal with React frontend, Spring Boot REST APIs and PostgreSQL persistence.
- Designed versioned **Flyway SQL migrations** for services, jobs, audit events and job logs.

Student Course Microservices | *Java, Spring Boot, REST, MySQL*

- A student-facing functionality, including student registration, login, viewing available courses, course enrolment, viewing enrolments, updating student profile details and checking graduation eligibility.
