

VASUDEV CHANDRASHEKHAR METI

Software Engineer | Full-stack Engineering | Applied AI and MLOps | Leeds, UK

vasudevcmeti@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Software engineer with 4+ years of experience building React, TypeScript and Java/Spring enterprise systems, including Micro Frontends, identity integrations and CI/CD-supported delivery. Currently extending into evaluation-driven Applied AI products and MLOps while completing an MSc in Advanced Computer Science.

PROFESSIONAL EXPERIENCE

Student Data Analyst | CSR Host Consulting Ltd

Leeds, United Kingdom | Apr 2026 - Present | Private Client Work

Underlying client data and analysis code cannot be shared publicly.

- Cleaned raw transcripts and survey data, corrected date-format corruption, harmonised datasets with different variable structures, assessed missing-data rates and combined data for analysis.
- Used ONS/HESA comparisons, statistical tests, confidence intervals, cross-tabulations, regression, clustering and student-level analysis.
- Applied post-stratification weighting, raking or propensity-based methods where appropriate, and supported forecasting with ARIMA or exponential smoothing.
- Contributed analysis for Green Book-style questions on bias, additionality and scenarios, including Monte Carlo simulation and postcode-based mapping, to support an economic case.

Bottomline Technologies

Bengaluru, India | Oct 2021 - Jan 2026

- Software Engineer II | Nov 2023 - Jan 2026
- Software Engineer | Jan 2022 - Nov 2023
- Trainee Engineer | Oct 2021 - Dec 2021
- Developed three Micro Frontends for organisation management, feature catalogues and identity services, and built and maintained reusable components.
- Contributed React and TypeScript frontend work and Java/Spring Boot services, including AutoOps functionality and frontend/backend validation.
- Implemented or supported OIDC, SAML and Google Authenticator-based MFA flows, and addressed penetration-test findings and security issues.
- Created Jest and Cypress tests, supported GitLab CI/CD and version-controlled delivery, and investigated integration and application issues across the stack.

SELECTED PROJECTS

AutoOps Portal | Independent Full-stack Project

React, TypeScript, TanStack Query, Spring Boot, PostgreSQL, Flyway, Docker

Built an independent public reconstruction of an operations portal for service registration, health checks, jobs and audit events. The implementation uses layered Spring Boot APIs, validation and structured error handling, PostgreSQL with Flyway migrations, and a React client. Health checks are persisted as asynchronous jobs for traceability. The public branch currently has only a Spring context-load test; broader API/UI coverage and Redis integration are not present yet.

github.com/mevasudevmeti/autoops-portal/tree/feature/backend

Student Course Microservices | Course Project

Java, Spring Boot, OpenFeign, Spring Data JPA, REST, MySQL

Built the student-service portion and browser/admin workflows for registration, login, course enrolment, profiles and graduation checks. Finance and library responsibilities are accessed through separate REST clients. The repository includes controller and service tests and has no verified public deployment.

TECHNICAL CAPABILITIES

Frontend: React, TypeScript, JavaScript, Micro Frontends, Webpack, responsive interfaces

Full-stack APIs: Java, Spring Boot, REST, PostgreSQL, Flyway, Django

Identity and security: OIDC, SAML, MFA, Google Authenticator, validation, security remediation

Delivery and quality: GitLab CI/CD, Git, Docker, Jest, Cypress, JUnit

Data analysis: Python, survey harmonisation, weighting, regression, clustering, ARIMA, Monte Carlo simulation

APPLIED AI DIRECTION

Building toward evaluation-driven Applied AI and MLOps. Current portfolio concepts are explicitly marked in development; unfinished retrieval, agentic, observability or deployment capabilities are not presented as complete.

EDUCATION

MSc Advanced Computer Science | Leeds Beckett University

Leeds, United Kingdom | Jan 2026 - Expected May 2027

Advanced computing, cloud technologies, large-scale system design and machine learning.

BTech Computer Science and Engineering | Alliance University

Bengaluru, India | 2017 - 2021 | 8.0/10 CGPA
